Ingredients in the formula	**EU-approved health claims**	**Areas of effect according to approved claims**

WHAT IS

Priosa® energy in detail

What is Priosa® energy?

Priosa® energy is an optimized amino acid complex developed to completely and effectively compensate for amino acid deficiencies observed in practice in a noticeable and measurable way. Amino acids are contained in both plant-based and animal foods. For building proteins and body tissue, our organism uses a total of 20 amino acids. Eight of these 20 so-called proteinogenic amino acids must necessarily be obtained through food because the organism cannot synthesize them from other substances.

The formulation has been further developed over years of patient observation and therefore also contains the necessary coenzymes for high bioavailability.

WHAT PRIOSA® ENERGY SUPPORTS

The most important of the 43 areas of effect

The vitamins and minerals contained contribute to the following body functions in accordance with EU-approved health claims.

Energy metabolism
Biotin contributes to normal energy-yielding metabolism.

Psychological function
Biotin contributes to normal **psychological function**.

Tiredness and fatigue
Folate contributes to the reduction of **tiredness and fatigue**.

Cognitive function
Iodine contributes to normal **cognitive function**.

Immune system
Folate contributes to the normal function of the **immune system**.

Nervous system
Biotin contributes to normal functioning of the **nervous system**.

WHAT CAN

What the nutrients in Priosa® energy contribute to

- Biotin contributes to normal energy-yielding metabolism.
- Biotin contributes to normal macronutrient metabolism.
- Biotin contributes to the maintenance of normal hair.
- Biotin contributes to the maintenance of normal skin.
- Choline contributes to normal lipid metabolism.
- Folate contributes to maternal tissue growth during pregnancy.
- Folate contributes to normal blood formation.
- Folate contributes to normal psychological function.
- Folate contributes to the reduction of tiredness and fatigue.
- Iodine contributes to normal cognitive function.
- Iodine contributes to normal functioning of the nervous system.
- Iodine contributes to the normal production of thyroid hormones and normal thyroid function.
- Magnesium contributes to electrolyte balance.
- Magnesium contributes to normal functioning of the nervous system.
- Magnesium contributes to normal protein synthesis.
- Magnesium contributes to the maintenance of normal bones.
- Magnesium has a role in the process of cell division.
- Vitamin B12 contributes to normal functioning of the nervous system.
- Vitamin B12 contributes to normal psychological function.
- Biotin contributes to normal functioning of the nervous system.
- Biotin contributes to normal psychological function.
- Biotin contributes to the maintenance of normal mucous membranes.
- Choline contributes to normal homocysteine metabolism.
- Choline contributes to the maintenance of normal liver function.
- Folate contributes to normal amino acid synthesis.
- Folate contributes to normal homocysteine metabolism.
- Folate contributes to the normal function of the immune system.
- Folate has a role in the process of cell division.
- Iodine contributes to normal energy-yielding metabolism.
- Iodine contributes to the maintenance of normal skin.
- Magnesium contributes to a reduction of tiredness and fatigue.
- Magnesium contributes to normal energy-yielding metabolism.
- Magnesium contributes to normal muscle function.
- Magnesium contributes to normal psychological function.
- Magnesium contributes to the maintenance of normal teeth.
- Vitamin B12 contributes to normal energy-yielding metabolism.
- Vitamin B12 contributes to normal homocysteine metabolism.
- Vitamin B12 contributes to normal red blood cell formation.

- Vitamin B12 contributes to the normal function of the immune system.
- Vitamin B12 has a role in the process of cell division.
- Vitamin B6 contributes to normal energy-yielding metabolism.
- Vitamin B6 contributes to normal homocysteine metabolism.
- Vitamin B6 contributes to normal psychological function.
- Vitamin B6 contributes to the normal function of the immune system.
- Vitamin B6 contributes to the regulation of hormonal activity.
- Vitamin C contributes to normal collagen formation for the normal function of blood vessels.
- Vitamin C contributes to normal collagen formation for the normal function of cartilage.
- Vitamin C contributes to normal collagen formation for the normal function of skin.
- Vitamin C contributes to normal energy-yielding metabolism.
- Vitamin C contributes to normal psychological function.
- Vitamin C contributes to the protection of cells from oxidative stress.
- Vitamin C contributes to the regeneration of the reduced form of vitamin E.
- Zinc contributes to normal DNA synthesis.
- Zinc contributes to normal carbohydrate metabolism.
- Zinc contributes to normal fertility and reproduction.
- Zinc contributes to normal metabolism of fatty acids.
- Zinc contributes to normal protein synthesis.
- Zinc contributes to the maintenance of normal hair.
- Zinc contributes to the maintenance of normal skin.
- Zinc contributes to the maintenance of normal vision.
- Zinc contributes to the protection of cells from oxidative stress.
- Vitamin B12 contributes to the reduction of tiredness and fatigue.
- Vitamin B6 contributes to normal cysteine synthesis.
- Vitamin B6 contributes to normal functioning of the nervous system.
- Vitamin B6 contributes to normal protein and glycogen metabolism.
- Vitamin B6 contributes to normal red blood cell formation.
- Vitamin B6 contributes to the reduction of tiredness and fatigue.
- Vitamin C contributes to maintain the normal function of the immune system during and after intense physical exercise.
- Vitamin C contributes to normal collagen formation for the normal function of bones.
- Vitamin C contributes to normal collagen formation for the normal function of gums.
- Vitamin C contributes to normal collagen formation for the normal function of teeth.
- Vitamin C contributes to normal functioning of the nervous system.
- Vitamin C contributes to the normal function of the immune system.
- Vitamin C contributes to the reduction of tiredness and fatigue.
- Vitamin C increases iron absorption.
- Zinc contributes to normal acid-base metabolism.
- Zinc contributes to normal cognitive function.
- Zinc contributes to normal macronutrient metabolism.
- Zinc contributes to normal metabolism of vitamin A.
- Zinc contributes to the maintenance of normal bones.
- Zinc contributes to the maintenance of normal nails.
- Zinc contributes to the maintenance of normal testosterone levels in the blood.
- Zinc contributes to the normal function of the immune system.
- Zinc has a role in the process of cell division.

INSIGHTS

Images

MANUFACTURING & QUALITY

Tested quality

Sanopoly develops highly pure nutritional supplements in medically supervised formulations. Production takes place in Austria at an established pharmaceutical contract manufacturer with over 25 years of experience.

ISO 22000

Certified management system for food safety according to international standard.

DEKRA tested

Independent audit of complete quality management by DEKRA.

Laboratory tested

Testing of the ingredients for heavy metals and microbiological purity.

INGREDIENTS

Nutritional values and ingredients

Nutrients	per daily dose * (= 5 Capsules)	% NRV **
Vitamin C	12 mg	15
Vitamin B6	0.21 mg	15
Folic acid (Vitamin B9 / B11)	400 µg	200
Vitamin B12	30 µg	1200
Biotin (Vitamin B7 / B8)	450 µg	900
Magnesium	56.25 mg	15
Zinc	5 mg	50
Iodine	100 µg	67
Sodium	17 mg	–
Taurine	40 mg	–
L-Methionine	710 mg	–
L-Valine	240 mg	–
L-Lysine	210 mg	–
L-Isoleucine	210 mg	–
L-Phenylalanine	180 mg	–
L-Tryptophan	180 mg	–
L-Glycine	125 mg	–
L-Threonine	120 mg	–
L-Tyrosine	75 mg	–
L-Glutamine	70 mg	–
L-Cysteine	60 mg	–
L-Leucine	60 mg	–
L-Aspartic acid	50 mg	–
L-Glutamic acid	40 mg	–
L-Histidine	30 mg	–
L-Ornithine	20 mg	–
L-Arginine	12 mg	–
D-Arginine	3 mg	–
Choline	82.5 mg	–
Melon fruit juice concentrate (SOD)	3.35 mg	–
SOD Coated	40.2 IU	–

** per daily dose ** % NRV = nutrient reference values according to Regulation (EU) No 1169/2011. Vitamins and minerals below 15 % NRV are not listed.*

Recommended intake
5 capsules

Ingredients
L-Methionine, Hydroxypropyl methylcellulose (capsule shell), Magnesium citrate, L-Lysine hydrochloride, L-Valine, L-Isoleucine, Choline Bitartrate, L-Phenylalanine, L-tryptophan, L-Glycine, L-Threonine, Kelp seaweed extract, L-Cysteine hydrochloride, L-Tyrosine, L-Glutamine, L-Leucine, L-Aspartic Acid, Sodium chloride, L-Glutamic acid, Taurine, L-Histidine base, L-Ornithine Hydrochloride, Zinc bisglycinate, L-Arginine Hydrochloride, L-Ascorbic acid, Rice protein, Melon fruit juice concentrate, D-Arginine, (6S)-5-methyltetrahydrofolate glucosamine salt, D-Biotin, Pyridoxine hydrochloride, 5'-deoxyadenosylcobalamin, Methylcobalamin.

Notes
Do not exceed the stated recommended daily intake. Food supplements are not a substitute for a varied diet. A balanced diet and healthy lifestyle are important. Keep out of reach of small children. Store at room temperature (max. 25 °C), dry and protected from light. Use within 3 months of opening the packaging.* Moisture-sensitive product. Do not remove the enclosed desiccant sachet. The desiccant sachet is not suitable for consumption. When taking antidepressants, consult your doctor or therapist before consumption. Not suitable for pregnant women, nursing mothers, children and adolescents.
After taking this product, the ability to participate in road traffic may be impaired.
Do not take together with salicylates (e.g. aspirin). Avoid taking additional zinc-containing food supplements.
Persons undergoing laboratory tests should inform their doctor or laboratory staff that biotin is being taken or has been taken recently.
* Exceptions are packaging units whose daily dose and sales quantity require intake over a longer period.
